

# The Globe: Your Online Connection to the World in Context

The Globe is NGA's modern, secure web presence that features integrated geospatial content, tools and services in an engaging environment to provide context to information about global events.

PERSONAL | ENGAGING | CONSISTENT | ACCESSIBLE | RELEVANT

As the centerpiece of NGA's transformation to a customer-driven enterprise, the Globe provides a **powerful self-service capability** that enables the Agency to meet the opportunities presented by rising customer expectations, an expanding customer base and rapid technological advancements. Ultimately, the Globe will **dramatically improve** the user's ability to find and discover geospatial intelligence in a cohesive environment that is **accessible, discoverable** and **usable** on any device and network.

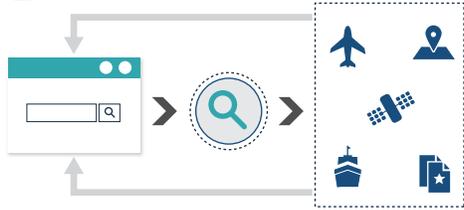

**NGA**  
NATIONAL GEOSPATIAL-INTELLIGENCE AGENCY

**@ GEOINT 2015**

# The Globe: 5 Game-Changing Features

The Globe encompasses five key features that will change the way in which NGA supports our customers.

## 01 Enterprise Search

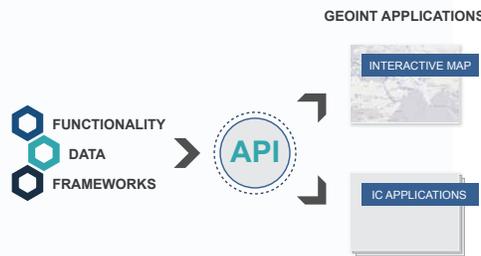

By consolidating legacy search tools into a single enterprise search and discovery system, NGA reduces cost, eliminates confusion and delivers authoritative GEOINT into the hands of our customers.

## 02 Advanced Storytelling

Storytelling provides additional value for NGA's customers – including tactical warfighters, strategic planners and National Security Council (NSC) decision makers – by fusing GEOINT production into comprehensive stories.

## 03 Map Application Programming Interface (API)

Implementing a Map API reduces the cost and time associated with point to point map solutions, enables modular enhancement without affecting existing applications and equips NGA to deliver a true Map API to ICITE.

## 04 Ecosystem Navigation Bar

Incorporation of the Ecosystem Navigation Bar in the Globe unifies the NGA web presence by wrapping Globe components with a consistent, branded experience.

## 05 Responsive and Mobile Design

Developed using the latest responsive web design technologies, the Globe allows for dynamic rendering of pages based on the user's screen size, device and bandwidth.
