

INNOVATIVE GEOINT APP PROVIDER PROGRAM (IGAPP)

TRUSTED GEOSPATIAL INTELLIGENCE APPLICATIONS FOR TODAY'S NEEDS

The challenge: As the demand for mobile applications increases, federal agencies are facing a challenge to provide applications that offer what customers expect: a user experience that mirrors what they have on their personal devices and systems.

The solution: The National Geospatial-Intelligence Agency's new Innovative GEOINT Application Provider Program, or IGAPP, provides an answer to this challenge. Rather than developing and procuring applications project-by-project, IGAPP connects agencies to a qualified pool of registered application, or app, developers. The developers create various apps that are then tested, evaluated and measured against customers' needs. The results of these efforts are found in NGA's GEOINT App Store, apps.nga.mil, an online platform that provides useful apps and web services for consumers of geospatial data, including first responders and warfighters. These powerful yet intuitive software tools are simple to find and use for completing specific GEOINT tasks supporting these mission areas:

Disaster Response

- Disaster Atlases
- Road Network
- Points of Interest
- Elevation Datasets
- Communication
- Utilities

AIR

- Safety of Navigation
- Aeronautical Information
- Aeronautical Surveys
- Flight Publications
- Charts
- Vertical Obstructions

SEA

- Safety of Navigation
- Maritime Information
- Maritime Surveys
- Charts
- Notice to Mariners

LAND

- Feature Data
- Vegetation
- Maps
- Controlled Imagery

SCIENCE

- GPS
- Photogrammetry
- Gravity
- Coordinate Systems
- Crowdsourced Data
- News Reporting

Additional Mission Areas

- Intelligence Integration
- Activity-Based Intelligence (ABI)
- Warfighter Support
- Foundation Data
- Phenomenologies
- Applied Imagery Sciences
- Counterterrorism
- Counterproliferation
- Cyber Warfare
- Homeland Security
- Humanitarian and Disaster Relief
- Strategic Intelligence

NGA

@ GEOINT 2015

What it is: IGAPP answers NGA’s need for reliable apps development. It is a conduit between NGA and innovative development sources, including startups, academia and mid-sized software firms. IGAPP finds and qualifies developers to build apps that answer NGA customer needs—reliably, securely, quickly, cost-effectively and through a single contract.

IGAPP PROVIDES A CONNECTION TO INNOVATIVE APPLICATIONS DEVELOPMENT

The purpose of IGAPP is to make the connection between centers of innovation and the needs of federal agency customers.

In the early stages of IGAPP, app developers from across the country were polled to determine their interest and attraction to developing federal apps. The queried individuals responded positively about IGAPP and the opportunity it provides them to gain a foothold in a market with a well-defined customer set. The polling also found that developers are eager to make a difference in the work of federal agency end-users and to work from user-expressed needs.

As a trusted broker, IGAPP offers dedicated relationship management between these customers and developers to ensure that requirements are clear and that end-products meet their needs.

IGAPP PROVIDES MISSION SUPPORT FOR THE MOBILE WORLD

- IGAPP, via the GEOINT App Store, delivers NGA customers rapid and cost-effective access to an array of GEOINT-focused applications designed to meet their needs and support their missions.
- Easy conveyance of customer needs: Upon accessing the GEOINT App Store, customers can use the convenient “Submit new Idea” app to tell NGA about their GEOINT application needs. This feature empowers customers to directly share their ideas with the developers.

LEARN MORE/GET STARTED WITH IGAPP

IGAPP can revolutionize your approach to providing the mobile applications your customers demand. Contact us at geoint.appstoreteam@nga.mil to learn more about how we can help you.
